LANCERO

LANCERO WALNUT

Inertia System requires no outlet for gas or barrel recoil, but operates by means of a spring that is freely interposed between the bolt head and the bolt.

Inertia operation is based on the basic principle of inertia utilizing the kinetic energy created by the projection of the fired cartridge within an unvented barrel.

DROP OUT TRIGGER SYSTEM

The trigger mechanism can be easily detached from the bottom of the receiver simply by removing one steel pin. This allows the complete trigger system to be taken out for easy cleaning and then equally quickly re-assembled. Nothing could be simpler in order to keep your LANCERO in excellent working condition. A cross bolt safety button located at the rear of trigger guard is quick and easy to operate.

**INERTIA
SYSTEM**

Standard for CIP countries

TECHNICAL SPECIFICATIONS **LANCERO**

MODEL	GAUGE	CHAMBER	BARREL LENGTH	RIB	CHOKE	CAPACITY	STOCK	WEIGHT
LANCERO WALNUT	12	3" (76 MM)	71CM (28")	8 MM	F, IM, M, IC, SK	4+1	TURKISH WALNUT, OIL FINISHED	3.1 kg (6.8 lbs)*
LANCERO SYNTHETIC	12	3" (76 MM)	71CM (28")	8 MM	F, IM, M, IC, SK	4+1	SYNTHETIC	3.2 kg (7 lbs)

LIGHT ALLOY RECEIVER

The LANCERO receiver is CNC machined from aircraft grade aluminium alloy to reduce overall weight and enhance the handling characteristics. All receivers have grooves machined into their top surface to allow for scope mounting.

PERFECT BALANCED BARREL

Lancero's barrels emerge after processing 7000 series steel with high technology. All parts are welded with silver in special bakery ovens. With its specially designed mobile chokes, it enables best groupment and shooting performance

COATING OPTIONS

The Lancero has various cerakote and camo options.

HARD CASE

Also there is special designed hard case option for Lancero to carry and use your shotgun in every situation.

RED MAGAZINE CAP

Red magazine cap showing the magazine tube unloaded.

LANCERO is an inertia operated semi-automatic shotgun designed using the latest technology, which combined with Suvari's considerable experience, results in a gun whose performance is as good as its appearance is pleasing to the eye. The LANCERO inertia system is simple and comprises of only three primary parts: the bolt body, the inertia spring and the rotating bolt head. Simple is better.

With a greatly reduced mass of parts the inertia system can cycle faster. Gas, burnt powder and other residues remain in the barrel where they belong, rather than being channelled into the gun's mechanism, as they are in gas system.

The strong steel locking lugs of the inertia system's rotating bolt head ensure the tightest possible lock up between the bolt and the barrel. The bolt head's rotating lugs not only lock steel to steel into the gun's barrel but the lugs lock in even tighter during firing. With the inertia system being much cleaner in operation, cleaning the LANCERO takes only a fraction of the time it can take to clean a gas operated gun.

Not only is the inertia system incredibly simple, it's also light in weight; this allows LANCERO shotguns to be some of the lightest semi-automatic shotguns ever produced. With no springs, action bar linkage or heavy under barrel gas cylinder inside the forend, inertia system shotguns balance like a fine game gun should.
